ROUSHAN KUMAR

Full-Stack Developer | React, Next.js, Node.js & TypeScript Specialist

Patna, Bihar, India | +91-9431483512 | roushanraut404@gmail.com | astreon.me | github.com/Hey-Astreon | linkedin.com/in/astreon4547

PROFESSIONAL SUMMARY

Full-Stack Software Developer and Creator of AstreWork, skilled in building end-to-end web products, modular API backends, and responsive user interfaces across modern cloud architectures. Proven ability to bridge scalable Node.js/C# API services with modern React.js and Next.js frontends, state management hooks, and AI integrations. Experienced in optimizing client-side render performance, enforcing strict zero-knowledge security protocols, and shipping production-ready web platforms with low latency.

TECHNICAL SKILLS

- **Frontend UI & Full Stack:** React.js, Next.js 16 (App Router), TypeScript, JavaScript (ESNext), Redux, Tailwind CSS, HTML5/CSS3
- **Backend & Microservices:** Node.js, Express.js, Fastify, C# (.NET Core), Python (FastAPI), REST APIs, Server Actions
- **Databases & Caching:** Turso Cloud LibSQL (WAL), Redis 7 (LRU), PostgreSQL, MongoDB, SQLite, Prisma ORM
- **Cloud & DevOps:** Oracle Cloud (OCI ARM64), Docker, Docker Compose, Caddy (HTTP/3), GitHub Actions CI/CD, Watchtower, Vercel
- **Languages & Runtimes:** TypeScript, JavaScript, Python, C#, Java, C, Rust, SQL
- **AI & Security:** Gemini API, Web Crypto API, AES-GCM, PBKDF2, HMAC-SHA256, JWT Auth, Zod Validation, Vitest, xUnit

TECHNICAL PROJECTS

AstreWork — Autonomous Career Intelligence Engine & Distributed Harvester (OCI, Docker, Redis) Live Demo | GitHub

- **Creator & Lead Backend Developer:** Engineered distributed scrapers on Oracle Cloud (OCI ARM64) aggregating 14,000+ remote opportunities daily across 7 platforms with 0% duplication.
- **Cloud Infrastructure & Microservices:** Deployed on Oracle Cloud (OCI Ampere ARM64) within multi-stage Docker containers managed by Watchtower CI/CD and Caddy HTTP/3 reverse proxy with automated SSL, maintaining 99.9% uptime and sub-50ms global API latency.
- **Distributed Caching & Concurrency:** Architected data persistence across Turso Cloud LibSQL (distributed SQLite WAL) and Redis 7 LRU caching, cutting duplicate job ingestion to 0% and reducing repeated query latency by 85%.

Astra Vision - Developer Sandbox & Code Graph Parser (FastAPI, Python, Monaco, Tree-Sitter) Live Demo | GitHub

- **Product Architecture:** Architected an automated code-parsing platform and browser sandbox that allows developers to safely execute untrusted code while visualizing full-stack repository dependency graphs.
- **Sandbox Runtime Challenge:** Built a self-healing Python execution engine with subprocess isolation and security checkpoints to intercept unauthorized OS file system calls and network socket requests in real time.
- **Indexing Performance:** Integrated Tree-Sitter AST compilers and ChromaDB vector search to parse repository syntax nodes, enabling instant code graph dependency analysis under 200ms.

Alyra Lock - Secure Zero-Knowledge Password Vault (React, TypeScript, Express, MongoDB) Live Demo | GitHub

- **Product Architecture:** Engineered a client-side zero-knowledge password vault ensuring master encryption keys remain entirely isolated inside user browser memory, mitigating cloud database leak risks.
- **Cryptographic Architecture:** Implemented Web Crypto API primitives utilizing AES-GCM (256-bit) payload encryption and PBKDF2 key derivation over 100,000 hashing iterations for key security.
- **Performance & Security:** Developed high-throughput Express.js REST API sync endpoints with JWT authentication and strict CORS headers, keeping vault database sync latency under 200ms.

TECHNICAL SIMULATIONS & VIRTUAL EXPERIENCES

Commonwealth Bank (CommBank) - Software Development Virtual Simulation June 2026

- **Problem & Scope:** Diagnosed and resolved silent data overwrite bugs across high-traffic C#/.NET Core financial API controllers handling MongoDB document updates across financial services endpoints.
- **Action Taken:** Extended C# Web API controllers with $set atomic operators for partial payload updates and modernized an interactive React/Redux Goal Manager UI component for banking clients.
- **Key Outcome:** Authored comprehensive automated test suites using xUnit and Moq, covering complex boundary conditions to guarantee high reliability and transactional consistency.

Y Combinator (YC Startup - Shiptivity) - Software Development Virtual Simulation June 2026

- **Problem & Scope:** Fixed key constraint collisions and slow re-rendering performance on a real-time drag-and-drop Kanban workflow board used by engineering teams to track task state transitions.
- **Action Taken:** Architected dynamic SQLite priority reordering logic using atomic transactions to update priority ranks sequentially and integrated Dragula drag-and-drop state hooks in React.
- **Key Outcome:** Reduced UI component re-render cycles by 30% and patched OpenSSL compilation bottlenecks in legacy Node.js Webpack configurations to optimize runtime builds.

Walmart USA - Advanced Software Development Virtual Simulation May 2026

- **Problem & Scope:** Solved indexing overhead and performance bottlenecks in high-volume retail inventory processing queues handling unnormalized data ingestion from legacy spreadsheets.
- **Action Taken:** Implemented a generic K-ary Max Heap structure in Java using fast bitwise shift operators (<<, >>>) and built 3NF database schemas with design pattern abstractions.
- **Key Outcome:** Accelerated queue indexing calculations by 35% and engineered automated Python ETL pipelines using csv and sqlite3 to clean and consolidate disparate spreadsheets.

EDUCATION

Bachelor of Computer Applications (BCA) - Amity University Noida Expected July 2028

Relevant Coursework: Data Structures & Algorithms (DSA) • Database Management Systems (DBMS) • Operating Systems (OS) • Computer Networks • Object-Oriented Programming (OOP)
